

WATER AS A WEAPON OF INTERNATIONAL CONFRONTATIONS

According to the UN Secretary General, “ensuring food security for all will depend on the sustainable use of our most critical finite resource –which is water.” The former Secretary General, Kofi Annan, had warned that “Fierce competition over water resources has prompted fears that water issues contain the seeds of violent conflict. If the entire world’s peoples work together, a secure and sustainable water future can be ours.” UNESCO director stated that “More than over land or oil, it is over water that the bitterest conflicts of the near future may be fought.”

The thoughts of these legendary statesmen on the unconditionality of water for future life survival are carefully exploited in this book, that gives a clear picture on national and international water battles, with clear examples and sustainable strategies in order to overcome this human upheaval.

Prof. AJEAGAH Gideon AGHAINDUM of the University of Yaounde 1 is a holder of a PhD and numerous postdocs in the biological sciences, water modelling and environmental engineering. He is an international consultant in universities, organizations and governments across the globe on the sustainable protection of aquatic resources.
